SHAN ALI

Machine Learning & Data Science Professional

Lahore, Pakistan | +92 323 4083930 | as1399366@gmail.com
https://www.linkedin.com/in/shan-ali-b34555317 | https://github.com/Shani44

PROFESSIONAL SUMMARY

Computer Science graduate specializing in Machine Learning and Data Science, with proven hands-on expertise in Python, deep learning architectures (CNN, ANN), and end-to-end ML pipeline development using TensorFlow, Keras, and Scikit-learn. Demonstrated ability to translate raw data into production-ready models through rigorous preprocessing, feature engineering, and performance evaluation. Combines strong analytical foundations in data structures and database design with a disciplined, results-driven approach to problem-solving. Eager to contribute technical depth and initiative to a professional Machine Learning or Data Science team.

TECHNICAL SKILLS

Programming & Frameworks: Python, C++, Flask, FastAPI, OOP, Data Structures & Algorithms

Machine Learning & AI: Scikit-learn, Keras, TensorFlow, ANN, CNN, SVM, KNN, Decision Trees

Data Science & Analytics: Pandas, NumPy, Data Preprocessing, Data Visualization, Matplotlib, Seaborn

Databases: MySQL (CRUD operations, schema design)

Tools: GitHub, Jupyter Notebook, Google Colab

WORK EXPERIENCE

Python Development Intern | *High Tech Software House* Aug 2025 – Oct 2025

- Developed and deployed multiple Python-based mini projects under deadline-driven conditions.
- Collaborated remotely with a team, delivering project milestones on a weekly basis.
- Strengthened problem-solving, OOP design, and core Python programming skills.

KEY PROJECTS

Skin Disease Detection System | *CNN, TensorFlow, Keras*

- Built an AI-based image classification system to detect skin diseases using Convolutional Neural Networks (CNN).
- Applied image preprocessing techniques including resizing, normalization, and augmentation to improve model performance.
- Evaluated model performance using confusion matrix, precision, recall, and ROC curves, targeting 85%+ accuracy.
- Managed the full pipeline: data handling, feature extraction, model training, and optimization.

Social Media Platform (Console-Based) | *C++, OOP*

- Designed a console-based social media system applying core OOP principles: encapsulation and abstraction.
- Implemented user profiles, interests, hobbies, and basic chat functionality.
- Used classes and vector-based data structures for efficient, modular data management.

Student Management System | *Python, MySQL*

- Developed a database application to manage student records, grades, and attendance.
- Designed a MySQL schema and implemented full CRUD operations for reliable data handling.
- Integrated Python with MySQL for efficient, accurate academic data access.

University Network Design | *Cisco Packet Tracer*

- Designed a simulated university department network using Cisco, connecting multiple departments.
- Configured links between departments to enable reliable data transfer across the network.

EDUCATION

Bachelor of Science in Computer Science | *University of Management and Technology, Lahore*

Relevant Coursework: Python Development & Machine Learning, Data Structures & Algorithms, Database Management Systems (MySQL), Artificial Intelligence

PERSONAL ATTRIBUTES

- Highly ambitious and self-driven, proactive in learning new technologies.
- Strong work ethic — punctual, honest, and respectful of workplace culture.
- Collaborative mindset, eager to support and learn from peers; passionate about Data Analysis, Machine Learning, and Artificial Intelligence.
